

## MORE PEOPLE LOOK INTO YOUR GARAGE THAN ANY OTHER ROOM IN YOUR HOME!

This durable seamless product transforms your garage into a showroom for your vehicle in just minutes!

The tough PVC non-porous surface has been specially formulated to protect against oil, antifreeze, salt, and common contaminants found on garage and shop floors.

Unique rib construction channels liquids away and controls debris. Ribs provide a slip-resistant walking surface around the vehicle.

### Why should you use Roll-Out Garage Flooring instead of epoxy coatings?

#### 1) Easier Installation

The preparation for painting an epoxy coated floor can be intensive- potentially lasting a period of days. Even then, there is no guarantee the coating will stick. Painting a garage floor involves many variables such as prep-time, humidity, temperature, dry-time, and the skill to do it. Yes, there are so called "Do-It-Yourself" Epoxy kits. However, properly painting a garage floor requires skill that does not come in a kit. And even if one has the skill, the numerous steps required for a quality garage floor paint job such as degreasing, etching, taping, drying and etc. make painting a garage floor less than practical. With Roll-Out Garage Flooring, simply **unroll onto the garage floor and trim the edges** with a utility knife.

### **2) Lower Cost**

A quality professional coating company will likely charge anywhere from \$5 to \$15 a square foot in labor fees alone. Garage floor tile solutions will cost \$4 to \$6 per square foot for the tile alone—plus hourly labor charges for proper installation. With Roll-Out Garage Flooring, **material costs will be lower and labor costs will be eliminated.**

### **3) Longer-term Durability**

Once painted or tiled, these garage floor coverings are subject to chipping, peeling, cracking, scratches and hot-tire pickup. These normal "wear and tear" realities can lead to the reapplication of the paint or tile within a matter of years. Roll-Out Garage Flooring has been manufactured from tough, specially formulated, polyvinyl material that will **beautify in minutes and last for years.**
