

Solid Step Cote for Hospitals

Recommended Formulation: 03 or 04

Hospitals and Health Care Facilities require both hygienic, sanitary conditions as well as maximum safety for staff, patients and visitors. Unfortunately, many hospitals and health care facilities feature slippery tile or vinyl composition flooring which often cause unnecessary slip and fall hazards.

While keeping a shiny and clean floor is important for the image of health care facilities, safety should be a primary consideration. Being proactive about safety and reducing general liabilities is a central focus for any successful health care operation.

Solid Step Cote is the only Green, non toxic, non slip solution on the market that bonds with any flooring surface including ceramic tile, polished stone and VCT as well as fiberglass and acrylic tubs and showers.

The overwhelming majority of slip and fall accidents in hospitals and health care facilities occur in the patient rooms and bathrooms. Treating those and other flooring surfaces throughout the facility including operating rooms, cafeterias, patient bedrooms and bathrooms and food preparation areas is key to preventing slips and falls within a hospital.

Solid Step Cote is a Green, crystal clear, single component solution that contributes to LEED ratings for your health care facility. It safe and easy to apply and maintain, has no fumes, toxins or unpleasant odors, and can be walked on within 4-6 hours of application. These factors make **Solid Step Cote** the only choice for creating non slip floors in your health care facility or hospital.

Make your hospital safer today by preventing slip and fall accidents with **Solid Step Cote**.
