

100-1 MAT CLEANING & CARE GUIDE

AcroMat 100-1 Series mats are made from 5/8" thick nitrile rubber with antimicrobial components. They are impervious to water, fluids, are not degraded by chemicals, and will not increase in weight with sanitation.

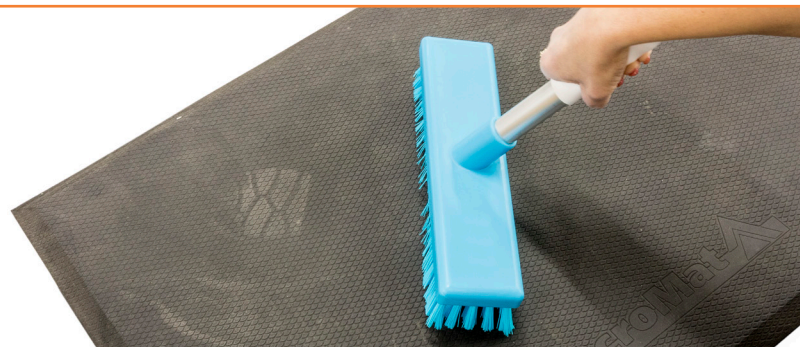

BONDING ADHESIVE

AcroMat 100-1 Series mats are made from a high quality, 100% nitrile foam material. The raw sheets are molded rather than extruded which means most mats are cut and bonded to create the desired size. Although the seams will be visible, the adhesive is a two-part rubber cement which is stronger than the mat itself, and doesn't affect the warranty, performance or life expectancy of the mat.

100-1 SERIES MATS ARE QUICK AND EASY TO CLEAN

Use a hose, mop, or spray-and-wipe method with industrial strength cleaner such as degreaser, bleach, ammonia, or an acid based cleaner to easily clean 100-1 Series mats. If needed, scrub mats with a deck brush.

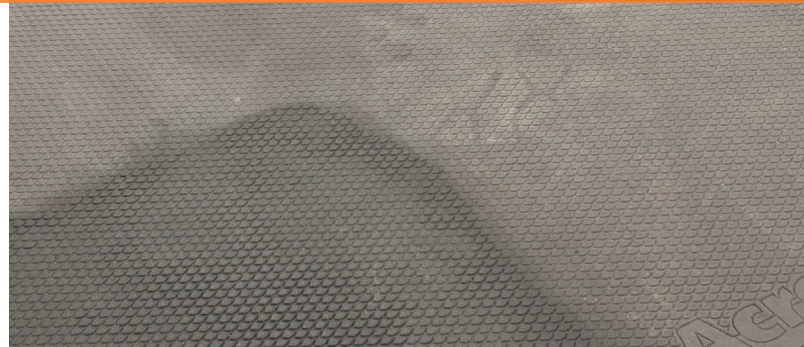

USE HOT WATER FOR BEST RESULTS

We recommend using a hose or pressure washer to clean with. Hot water will clean better and help to dry quicker. Smaller mats can be put in a conventional commercial kitchen washer for cleaning.

LEAVE TO DRY

Avoid putting wet mats back on the floor, especially on polished flooring. We do offer 100-1 Series mats with grommets that allow you to hang dry after cleaning.

WARRANTY:

The AcroMat 100-1 is guaranteed against defects in materials and workmanship for two years including premature wear.
